

Environmental Policy

Vision

Dedicated to Promoting Environmental Sustainability, Advancing to Be Green Technology Paradigm.

Strategy

1. Due diligence: effective mitigation and estimation of environmental impact caused by operations.
2. Target management: periodic monitoring and review of environmental sustainability performance targets.
3. Continuous improvement: effectiveness assessment of the implementation measures for environmental protection action plan.
4. Knowledge sharing: establishing a common exchange and cooperation mechanism for value chain partners.

Implementation

1. Senior management is committed to its responsibility for environmental protection and regularly monitors environmental policy and improvement in environmental performance.
2. A dedicated organization for environmental management has been established to formulate, promote, and maintain relevant systems and action plans in accordance with environmental policy; the organization also sets indicators and targets for reducing environmental impact, and regularly reviews and continuously improves environmental performance.
3. We implement the ISO environmental management system, practically abide by the environmental protection laws and regulations of local operational bases and international standards, and make every effort to continuously make improvements with respect to environmental risks.
4. We will purchase advanced equipment and refine manufacturing processes; construct clean production processes; reduce pollutants, use of toxic substances and waste discharge during production, and process wastes properly.

Environmental Policy

5. When engaging in operational activities such as R&D, procurement, production, operation, packaging, transportation, and existing or new products and services, the Company will consider the impact of the life cycle phase on the environment, and incorporate environmental impact assessment into its matters for due diligence when executing mergers and acquisitions so as to reduce the negative impact of operational activities on the environment and humanity.
6. We lead all Company employees, suppliers, contractors, customers, and business partners in establishing awareness of environmental protection and a culture of responsibility. And by use of communication meetings, education and training, and participation in external environmental organizations and activities, we enhance internal and external stakeholders' awareness in the Company's environmental policy and reducing environmental impact.
7. In response to risks and opportunities under climate change, we will implement water conservation, energy conservation, and mitigation of greenhouse gas emissions in our operations. We will continue to develop energy-saving products with low power consumption and create a future with sustainable technology.
8. We will continue to promote the construction of green plants, adopt best-practice pollution prevention and control technologies, strengthen environmental protection facilities, and reduce the impact on human health and the environment.
